EDUCATION

**Bachelor's in Business
Administration | Major in Accounting**
Ahran Canadian University
6th of October City, Egypt
GPA 3.48

- Graduation project: Scientific research (The relationship between the complexity of financial reporting and the financial reporting quality in corporation) — Grade: Excellent

OBJECTIVE

Business Administration graduate with a major in accounting, transitioning into Data Analysis and Machine Learning. Possess a strong analytical mindset, leveraging accounting, business, and data science knowledge to interpret complex datasets, build predictive models, and support data-driven decision-making. Proficient in Python, SQL, Excel, and visualization tools such as Power BI. Hands-on experience in cleaning, analyzing, and modeling data to drive actionable insights. Now a Certified Data Scientist Professional (Epsilon AI Academy, 2026), with formal training across the full data science lifecycle.

INTERNSHIP EXPERIENCE

Singleclic

Data Analyst

08/2025 – 11/2025

During my time at Singleclic, I utilized the AdventureWorks dataset to build a robust reporting framework. This project demonstrates my ability to take raw SQL-based data and turn it into a visual story that helps department heads make data-driven decisions regarding marketing spend and inventory management.

CERTIFICATION

Certified Data Scientist Professional

- Issuer: Epsilon AI Academy
- Issued Jul 14, 2026
- Valid through Jul 14, 2028
- Credential ID: 101764-26-EG
- Internationally accredited professional program (ISO 21001 & ISO 9001, IAF-recognized, EGAC-certified) covering the full data science workflow — completed via graded coursework, applied project work, and a capstone requirement spanning Machine Learning, Regression, Classification, and Clustering.

KEY RESPONSIBILITIES & ACHIEVEMENTS

- Gather, clean, and analyze large datasets to identify trends and business insights.
- Develop interactive dashboards and reports using Power BI and Excel.
- Apply statistical techniques and machine learning models to support strategic decisions.
- Collaborate with cross-functional teams to translate data insights into actionable recommendations.
- Ensure data integrity, accuracy, and consistency by implementing best practices.

SKILLS AND TOOLS

Programming & Querying

Data analysis using Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly), Data Cleaning, Data Processing, Web Scraping using BeautifulSoup, Data Deployment for visuals and insights using Streamlit, SQL

Data Visualization

Power BI, Excel (Pivot Tables, VLOOKUP)

Machine Learning

Regression, Classification, Clustering, Predictive Analytics, Scikit-learn

Business Intelligence

KPI Analysis, Reporting

Soft Skills

Fast learner, hardworking, ambitious, adaptable, strong communication, excellent time management

LANGUAGE

Arabic

Native language

English

Upper intermediate (B2)

CERTIFICATIONS

Epsilon AI Academy — Certified Data Scientist Professional

07/2026 – 07/2028

Credential ID: 101764-26-EG

Microsoft Power BI Data Analyst

Microsoft & CLS Learning Solution

01/2025 – 02/2025

Analyzing Data with Excel & Power BI

- Strong foundation in financial and managerial accounting, enabling deep data interpretation and business insights.
- Proficient in analyzing financial statements, budgets, and business performance metrics.
- Ability to leverage accounting principles in data-driven decision-making.

PORTFOLIO

Used Cars Market EDA & Interactive Dashboard

11/2025

Analysis of used car listings from Craigslist to uncover the primary drivers of vehicle pricing and market availability in the United States, including extensive data cleaning and an interactive market-research tool.

- Data Cleaning & Preprocessing: Handled missing values and filtered for realistic price ranges (\$1,000–\$250,000).
- Univariate Analysis: Explored distributions of price, odometer readings, and model years.
- Multivariate Market Trends: Analyzed price variation across states and manufacturer brand impact on resale value.
- Top-N Filtering: Built a dynamic filter for top states, manufacturers, or car types.
- Geographic Insights: Mapped listing density by state — California, Florida, and Texas among the most active markets.

Tools: Python (Jupyter) — Pandas, Plotly Express, NumPy | Deployment: Streamlit

Global Suicide Rates Analysis (1985–2016)

10/2025

Comprehensive exploratory data analysis (EDA) of global suicide rates spanning three decades, examining demographic, temporal, and economic factors to identify critical trends and correlations across nations and regions.

- Global Trend Tracking: Analyzed total cases and average rates over time to visualize global shifts in mental health statistics.
- Demographic Breakdown: Investigated how rates differ across gender and age groups, revealing higher averages in specific demographics.
- Economic Correlation: Explored the relationship between GDP per capita, the Human Development Index (HDI), and suicide rates.
- Interactive Dashboard: Developed a multi-page Streamlit application switching between global and country-level analysis.
- Geographic Hotspots: Identified the top 10 countries with the highest recorded total cases.

Tools: Python — Pandas, Plotly Express, NumPy | Deployment: Streamlit

World Layoffs — Data Cleaning & Exploratory Data Analysis (SQL)

End-to-end SQL workflow processing a global company-layoffs dataset: a rigorous data-cleaning phase followed by EDA to uncover trends in the global economy.

- De-duplication: Used CTEs and window functions (ROW_NUMBER) to identify and remove duplicate records.
- Standardization: Text mining to fix inconsistent naming and correct geographic typos.
- Data Type Transformation: Converted raw string dates into proper SQL date formats for time-series analysis.
- Handling Missing Data: Self-joins to intelligently populate null industry values.
- Time-Series Analysis: Rolling totals of layoffs by month.
- Company & Industry Rankings: DENSE_RANK() to find the top 5 companies with the most layoffs each year.
- Economic Impact Analysis: Aggregated by funding stage, country, and company.

Database: MySQL | SQL: CTEs, Window Functions, Self-Joins, Data Normalization, Subqueries
